

What went well:

- Had a good understanding of the work
- It was an enjoyable experience/process of finding the defects
- The predefined parameters made the process a lot less tedious and a lot quicker than individually typing it in everything

What could be improved:

- Better allocation of my time when juggling studying for QC and doing my projects
- Doing a lot so I don't fall behind

Work that is needed to be done next Sprint:

- Need to finish some of my testing
- To find more edge cases and test them
